

HTOOLS PROJECT - INSTALLATION & RUN GUIDE

Requirements

- Internet connection (required for API requests, WHOIS lookup, IP lookup features, and package installation)
 - Windows / Linux / Mac system
 - Python 3.10 or above
-

STEP 1 - INSTALL PYTHON

Option 1 (Recommended)

Download Python from the official website:

<https://www.python.org/downloads/>

IMPORTANT:

While installing Python, enable/check:

Add Python to PATH

Then click:

Install Now

Option 2

Install Python from Microsoft Store.

VERIFY PYTHON INSTALLATION

Open CMD / Terminal and run:

```
python --version
```

or

```
py --version
```

STEP 2 - INSTALL CODE EDITOR

Recommended Editor

VS Code

Download: <https://code.visualstudio.com/>

You can also use:

- PyCharm
 - Sublime Text
 - Any other editor
-

STEP 3 - OPEN PROJECT FOLDER

Extract/open the project folder:

htools

Open this folder inside VS Code.

STEP 4 - OPEN TERMINAL

Inside VS Code:

Terminal **New Terminal**

Shortcut:

Ctrl + `

STEP 5 - INSTALL PROJECT REQUIREMENTS

Run the following command:

```
pip install -r requirements.txt
```

If pip does not work, try:

```
py -m pip install -r requirements.txt
```

This will install:

- Django
 - requests
 - ipwhois
 - beautifulsoup4
 - python-whois
-

STEP 6 - RUN DATABASE MIGRATIONS

First, create migration files:

```
python manage.py makemigrations
```

If above doesn't work:

```
py manage.py makemigrations
```

Then, apply migrations to database:

```
python manage.py migrate
```

or:

```
py manage.py migrate
```

STEP 7 - START DJANGO SERVER

Run:

```
python manage.py runserver
```

or:

```
py manage.py runserver
```

If successful, terminal will show:

```
Starting development server at:  
http://127.0.0.1:8000/
```

STEP 8 - OPEN PROJECT IN BROWSER

Open browser and visit:

<http://127.0.0.1:8000/>

ADMIN PANEL

Open:

<http://127.0.0.1:8000/admin/>

DEFAULT LOGIN CREDENTIALS

Demo User

Username: demo**Password:** demo1234

Admin User

Username: admin**Password:** admin1234

STEP 9 - STOP SERVER

Press:

CTRL + C

inside terminal.

COMPLETE COMMAND SUMMARY

Run these commands in order:

```
pip install -r requirements.txt
python manage.py makemigrations
python manage.py migrate
python manage.py runserver
```

COMMON ERRORS

1. 'python' is not recognized

Python is not added to PATH.

Reinstall Python and enable **Add Python to PATH**

2. pip not working

Use:

```
py -m pip install -r requirements.txt
```

3. Port already in use

Run server on another port:

```
python manage.py runserver 8001
```

Then open:

<http://127.0.0.1:8001/>

PROJECT INTERNET REQUIREMENT

YES

Internet connection is required for some tools/features such as:

- WHOIS lookup
- IP lookup
- API requests
- Online data fetching

Without internet, online lookup-based features may not work properly.
